

National Taiwan University of Science and Technology

2020 Summer Program

MATH 111 Calculus 1

Course Outline

Term: June 01-July 03,2020

Course Code: MATH 111

Instructor: Professor Vadim Olshevsky

Home Institution: University of Connecticut

Office Hours: By Appointment

Email: olshevsky@gmail.com

Credit: 4

Course Description:

Calculus 1 is the first of a sequence of three courses in calculus covering basic calculus. Topics to be covered include a review of functions, limits, differentiation, applications of the derivative, and introduction of integration.

Course Objectives: The objective of the course is to build an understanding of the basic principles and applications of differential and integral calculus through lectures, homework, discussion, quizzes, and exams.

Required Textbooks:

Calculus: Early Transcendentals, 8th Edition, by James Stewart with WebAssign Access Code. Can be purchased directly at

<https://www.cengage.com/c/calculus-early-transcendentals-8e-stewart/9781337771498#compare-buying-options>

It is important that you purchase both the textbook and the WebAssign code, the latter is necessary for the homework assignments.

Homework: There will be online WebAssign homework assignments for each section of the text. Each assignment will be made available on several days before the section is covered in class. The due date for each assignment will be set by your instructor and will generally be two or three days after the material is covered in class. You will get five attempts for each question.

Grading & Evaluation

Attendance and participation: 10%
Homework: 30%
Midterm: 30%
Final: 30%

Grade	Range
A	90-100
B	80-89
C	70-79
D	60-69
F	0-59

Course Schedule

Week1 Functions: definition, representation, types, operations, mathematical models. Limits and continuity: limit of a function, the limit law, continuity, definition of a limit. Derivatives: Definition, rates of change

Week2 Derivatives: Differentiation rules: polynomial, trigonometric, inverse, logarithmic, exponential, implicit functions. The product, quotient, and chain rules.

Week3 Applications of differentiation: Higher derivatives, linear approximation and differentials, minima and maxima, the Mean Value Theorem, L'Hôpital's rule, limits at infinity and asymptotes, curve sketching.

Week4 Applications of differentiation: Applied optimization problems Integrals (Anti-derivatives, approximating areas, the definite integral).

Week5 Integrals: The Fundamental Theorem of Calculus, substitution rule.

Detailed Course Outline

Week	Chapter	Topic
	1 Functions	1.1 Definition and representation of functions 1.2 Types of functions 1.3 Operations on functions (Composition, inverse)
1	2 Limits and continuity	1.4 Mathematical models 2.1 The limit of a function 2.2 The limit laws
		2.3 Continuity 2.4 Precise definition of a limit
	3 Derivatives	3.1 Definition of a derivative 3.2 Derivatives as rates of change
		3.3 Differentiation rules (constants and polynomials) 3.4 The chain, product, and quotient rules
2	3 Derivatives	3.5 Derivatives of trigonometric functions 3.6 Derivatives of inverse functions
		3.7 Implicit differentiation 3.8 Derivatives of exponential and logarithmic functions
		Exam 1
		3.9 Higher derivatives 4.1 Linear Approximation and Differentials
3		4.2 Maxima and minima
	4 Applications of derivatives	4.3 The Mean Value Theorem 4.4 L'Hôpital's rule
		4.5 Limits at infinity and asymptotes 4.6 Curve sketching
		4.6 Curve sketching 4.7 Applied Optimization problems
4	5 Integrals	5.1 Anti-derivatives 5.2 Approximating areas 5.3 The definite integral
		Exam 2
		5.4 The Fundamental Theorem of Calculus
5	5 Integrals	5.5 Substitution Rule
		Final Exam
		Discussion of final exam

Student responsibilities/expectations: The main course material will be presented through lectures. A discussion session, to be held every Friday will offer an opportunity for students to discuss course material

國立臺灣科技大學

National Taiwan University of Science and Technology

No. 43, Keelung Road, Section 4, Taipei, Taiwan

and assigned problems with a teaching assistant (TA). Students are advised to keep pace with the course material as it is being presented. Consequently, students should endeavor to attend class and discussion sessions, and spend sufficient time working on assigned homework problems. If for any reason a student misses a class, he/she should endeavor to obtain the notes and learn the missed material. Students should not hesitate to ask questions or seek additional assistance to ensure that they are staying on pace with the class.

Examinations: There will be two midterm exams plus one cumulative final exam. The exams will contain problems to solve and definitions, brief explanations of concepts, and simple proofs.
