## Shanghai University of Finance & Economics

### 2021 Summer Program

### MATH 122 Calculus 2

### Course Outline

**Term: July 12 – August 6, 2021**

**Class Hours: 16:00-17:50 (Monday through Friday)**

**Course Code: MATH 122**

**Instructor: Dr. Calistus Ngonghala**

**Home Institution: University of Florida**

**Office Hours: TBA and by appointment**

**Email: calistusnn@gmail.com**

**Credit: 4**

**Class Hours:** This course will have 52 class hours, including 32 lecture hours, professor 8 office hours, 8-hour TA discussion sessions, 4-hour review sessions.

#### **Course Description:**

Calculus 2 is the second of a sequence of three courses in calculus covering basic concepts of calculus. The course covers integration techniques, applications of integrals, basic differential equations, sequences, and power series.

#### **Course Objectives:**

The objective of the course is to build an understanding of the fundamental principles and applications of integral calculus through lectures, homework, discussions, quizzes and exams.

**Required Textbooks:** Calculus: Early Transcendentals, 8th edition, by James Stewart or the online open source textbook found at <http://bit.ly/2vK7UTB>.

### Grading & Evaluation:

Attendance and participation:	10%
Homework and quizzes:	20%
Midterm:	30%
Final:	<u>40%</u>
Total:	100%

### Grade Range

A	90-100
B	80-89
C	70-79
D	60-69
F	0-59

### Course Schedule:

**Week1** *Integration*: Anti-derivative, indefinite integrals, approximating areas, definite integrals, Fundamental Theorem of Calculus, integration formulas, substitutions, integration of logarithmic and exponential functions. Integration by parts, trigonometric integrals.

**Week2** *Integration*: Trigonometric substitutions, rational fractions, other strategies, improper integrals. Arclength and surface area, area and volume of revolution

**Week3** *Applications of integration*: work, moment, center of mass, *Sequences and series*: Sequences, infinite series, comparison and limit comparison test, divergence and integral tests. Alternating series and ratio tests.

**Week4** *Sequences and series*: power series, radius and interval of convergence, Taylor and Maclaurin series

### Detailed Course Outline:

Week	Date	Chapter	Topic
		<b>1 Review of Cal-</b>	1.1 Anti-derivatives 1.2 Indefinite integrals 1.3 Approximating areas

		<b>culus 1 integra- tion</b>	1.4 The definite integral
<b>1</b>			1.5 Fundamental Theorem of Calculus 1.6 Integration formulas
		<b>2 Integration techniques</b>	1.7 Substitutions 1.8 Integration of logarithmic and exponential functions 1.9 Integrals resulting in inverse trigonometric functions
			2.1 Integration by parts 2.2 Trigonometric integrals
			2.3 Trigonometric substitutions 2.4 Integrating rational fractions (partial fractions)
<b>2</b>			2.5 Other strategies 2.6 Improper integrals
		Applications of integration	3.1 Arc length of a curve and surface area 3.2 Area and volume of revolution
			Exam 1
			3.3 work, moments and centers of mass
<b>3</b>			5.1 Sequences 5.2 Infinite series
		Sequences and Series	5.3 Comparison and limit comparison test 5.4 Divergence and integral test
			5.6 Alternating series test 5.7 Ratio and root tests
			5.8 Power series 5.9 Radius and interval of convergence
<b>4</b>			5.10 Taylor and Maclaurin series
			5.12 Applications of Taylor polynomials.
			Final Exam
			Discussion of final exam

**Student responsibilities/expectations:** The main course material will be presented through lectures. A discussion session, to be held every Friday will offer an opportunity for students to discuss course material and assigned problems with a teaching assistant (TA). Students are advised to keep pace with the course material as it is being presented. Consequently, students should endeavor to attend all class meetings and discussion sessions, be early for class, and spend sufficient time working on assigned homework problems. If for any reason a student misses a class, he/she should endeavor to obtain the notes and learn the missed material before the next class meeting. Students should not hesitate to ask questions or seek additional assistance to ensure that they are staying on pace with the class. Students will be expected to come to class prepared and ready to participate actively. Please, turn off your cell phones and put aside any unrelated material before class begins. Students should

exhibit a sense of responsibility and respect towards fellow students. Late-coming to class or early departure from class meetings will not be allowed.

**Examinations:** There will be one mid-term exam plus one cumulative final exam. Each exam will consist of a multiple choice and a problem (free-response) section. The free-response problem section will contain problems to solve and definitions, brief explanations of concepts, and simple proofs.

**Quizzes:** Quizzes will be administered periodically throughout course period. Quizzes are meant to test the understanding of covered topics, and to give a benchmark prior to the exams.

**Homework:** The purpose of homework is to develop more skills in the material covered. It will be the student's responsibility to solve the assigned homework problems in a timely manner. Students who intend to do well in the course are advised to solve the homework problems. Students should feel free to approach the instructor with difficulties from homework problems. Problems in which students encounter difficulties may also be discussed in class.
