Hankuk University of Foreign Studies

2025 Summer Session

MATH 122 Calculus 2

Course Outline

Course Code: MATH 122

Instructor: Professor Vadim Olshevsky

Home Institution: University of Connecticut

Office Hours: By Appointment

Email: olshevsky@gmail.com

Credit: 4

Class Hours:

This course will have 60 class hours, including 32 lecture hours, professor 8 office hours, 8-hour TA discussion sessions, 4-hour review sessions, 8-hour extra classes.

Course Description:

Calculus 2 is the second of a sequence of three courses in calculus covering basic concepts of calculus. The course covers integration techniques, applications of integrals, basic differential equations, sequences, and power series.

Course Objectives: The objective of the course is to build an understanding of the fundamental principles and applications of integral calculus through lectures, homework, discussions, quizzes and exams.

Required Textbooks:

Calculus: Early Transcendentals, 8th Edition, by James Stewart with WebAssign Access Code.
Can be purchased directly at

https://www.cengage.com/c/calculus-early-transcendentals-8e-stewart/9781337771498#compare-buying-options

It is important that you purchase both the textbook and the WebAssign code, the latter is

necessary for the homework assignments.

Homework: There will be online WebAssign homework assignments for each section of the

text. Each assignment will be made available on several days before the section is covered in

class. The due date for each assignment will be set by your instructor and will generally be two

or three days after the material is covered in class. You will get five attempts for each question.

Grading & Evaluation

Attendance and participation: 10%

Homework: 30%

Midterm: 30%

Final: 30%

Grading System (1 ~ 100)

A+ : 96 - 100	A : 91 - 95
B+ : 86 - 90	B : 81 - 85
C+ : 76 - 80	C : 71 - 75
D+ : 66 - 70	D : 60 - 65
F : 0 - 59	
Pa : Pass	Fa : Fail

Course Schedule

Week1 *Integration*: Anti-derivative, indefinite integrals, approximating areas, definite

integrals, Fundamental Theorem of Calculus, integration formulas, substitutions,

integration of logarithmic and exponential functions. Integration by parts.

Week2 *Integration*: Trigonometric integrals and substitutions, integrating rational

functions, other strategies, improper integrals.

한국외국어대학교
HANKUK UNIVERSITY OF FOREIGN STUDIES

Seoul Campus 02450 서울특별시 동대문구 이문로 107   tel 02.2173.2093   fax 02.960.7898

Global Campus 17035 경기도 용인시 처인구 모현면 외대로 81   tel 031.330.4114   fax 031.333.1708
81, Oedae-ro, Mohyeon-myeon, Cheoin-gu, Yongin-si, Gyeonggi-do, 17035, Korea

Week3 *Applications of integration*: Arc length and surface area of revolution, parametric curves, areas and length in polar coordinates, work, moment, center of mass, ordinary differential equations (basic concepts, direction fields, separable equations)

Week4 *Applications of integration*: conic sections, exponential growth and decay, the logistic equation. *Sequences and series*: Sequences, infinite series, comparison and limit comparison test, divergence and integral tests, alternating series and absolute convergence, power series, Taylor and Mackaurin series, applications of Taylor polynomials.

Student responsibilities/expectations: The main course material will be presented through lectures. Students are advised to keep pace with the course material as it is being presented. Consequently, students should endeavor to attend class and discussion sessions, and spend sufficient time working on assigned homework problems. If for any reason a student misses a class, he/she should endeavor to obtain the notes and learn the missed material. Students should not hesitate to ask questions or seek additional assistance to ensure that they are staying on pace with the class.

Examinations: There will be two midterm exams plus one cumulative final exam. The exams will contain problems to solve and definitions, brief explanations of concepts, and simple proofs.
