Course Description:

This course will provide and introduction to Classical Mechanics, the precise description of motion and the causes of change of motion.

Course Objectives:

1. Students will be able to develop quantitative models appropriate to problems in Physics. In particular students will learn Newton's Laws and how they govern motions of bodies in space.
2. Students will be able to assess the strengths and limitations of quantitative

models and methods used in Physics.

3. Students will be able to apply symbolic systems of representation.

4. Students will be able to collect, organize and analyze data from a variety of sources. Students will be able to formulate structured and logical arguments.

5. Students will be able to test hypotheses and make recommendations or predictions based on results.

6. Students will be able to communicate and represent quantitative information or results numerically, symbolically, aurally, visually, verbally, or in writing.

7. Students will have a basic understanding of the laws of mechanics and Newton's law of gravitation.

8. Students will learn Bernoulli's Laws and aspect of Fluid motion.

Required Course Materials:

Fundamentals of Physics by David Halliday, Robert Resnick and Jearl Walker, 12th ed.

Grading & Evaluation:

Course will be evaluated based on homework 25%, two midterm exams 50%, and one final exam 25%.
